DETAILED ACTION

Election/Restrictions

Claims 1-5 and 14-16 are generic to the following disclosed patentably distinct species:

Species 1: shown in figure 1

Species 2: shown in figure 2A-E

Species 3: shown in figure 3A-C

Species 4: shown in figure 4A-C

Species 5: shown in figure 5 and 6A-E

Species 6: shown in figure 9

Species 7: shown in figure 9A

Species 8: shown in figure 10

Species 9: shown in figure 11

Species 10: shown in figure 12

The species are independent or distinct because each disclosed species has its own distinct characteristics and properties that would require a burdensome search for the examiner. For example, species 1 is composed of thin wire struts with an interior opening and radiused ends; Species 2 is a cuff-shaped apparatus with thick side portions (62) without radiused ends; Species 3 is relatively flat apparatus with a distinct mesh appliance intended for promoting tissue growth with an outer peripheral portion

comprised of a woven mesh wire; Species 4 discloses a cuff shaped member without an interior space in the body, radiused ends, and apertures 87 through the body portion; Species 5 is comprised of a plurality of struts connected at the end portions; Species 6 discloses a unitary structure with a circular member and two longitudinal members extending from the end portions of the circular body member perpendicular to the orientation of the partial ring; Species 7 is similar to species 6 except it has a downwardly, sloping transverse portion 1720; Species 8 discloses another embodiment in which the wire is configured in a squared U-shape; Species 9 is a bow shaped member; and Species 10 discloses a bow-shaped member with different radius of curvature than the bow shaped member disclosed in species 9. The applicant discloses these separate embodiments and acknowledges in the specification that these are in fact separate embodiments. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
